**MEDICAL WORLD LABORATORY RESULT(S)**

Name: **NANSIMBE OLIVER PHOEBE**  
 Gender/Age: **Female/26** Patient No: **19-10590**  
 Specimen No: **19-10590-001** Visit Date: **22 January 2019**  
 Drawn Date/Time: **22 Jan 2019 05:46 PM** Drawn By: **BYANGO SHAMIRU**  
 Bill Mode: **Cash** Primary Doctor: **Doctor Project**  
 Bill Customer: **Cash Customer**

Test Name:	Result:	Normal Range:
HEPATITIS B SURFACE ANTIGEN	NEGATIVE	
HEPATITIS C	NEGATIVE	
TB X-RAY	NEGATIVE Piece	NEGATIVE

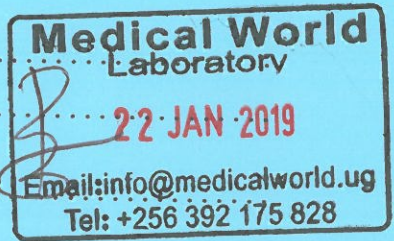

Reference: CHEST X-RAY FOR TB

HIV ELISA NEGATIVE  
 VDRL/TPHA NEGATIVE

Reference: TPHA /VDRL is a Specific Treponemal Antibody Test. A positive test may still be found 20-30 years after treatment or a life time. A positive Test indicates either present or past infection. Because T. pallidum IgG antibody can persist in the serum for long periods; specific tests can remain positive for many years, even after successful treatment.

HCG NEGATIVE
